ITALY I DIGITALISATION, SHORT FOOD CHAIN AND SOVEREIGNTY

Author: Matteo Metta

Abstract

Since 2016, Fuori di Zucca (i.e. Out of Pumpkin) is an association coordinating a Solidarity Purchasing Group (GAS) without lucrative purposes at the centre of Perugia city (Italy). Mr Domenico Lizzi (Project Coordinator) explains the role of digital tools in this network of social and physical exchanges between consumers and farmers. Facebook page: https://www.facebook.com/fuoridizuccaperugia/

Fuori di Zucca

Fuori di Zucca is currently composed by 80 consumers and 10 producer members. It strives for promoting the concept of food sovereignty in all its dimensions: e.g. direct relationship between consumers-producers, sustainable and ethical production, fair value-chain distribution.

The solidarity purchasing group is led by the consumers, coordinated by volunteers. This is an essential point. Consumers are the first actors who commit for an active participation, constant dialogue, and trust-based relationship with the local producers. 100% of their purchase goes directly to the farmers. Farmers are small-scale, close to Perugia, and follow ethical and sustainable farming methods. The organic label is not a prerequisite for Fuori di Zucca, considering that these farmers already produce organically, and consumers actively participate along the chain.

How does the Solidarity Purchasing Group work?

In Fuori di Zucca, the purchasing transactions between consumers and producers are intermediated by a voluntary group of young activists by the means of two online tools: WhatsApp and Google Modules. These two easily accessible tools allow to centrally manage data, standardise procedures, reduce the costs and risks of errors in transactions like 1) preparing the list of food offers with farmers; 2) selecting the food options (ordering); 3) validation of orders; 4) transmission of the order to the producers; 5) food distribution; and any other general communications (e.g. new producers joining the group or additional products available in the panel list). Every Friday, a WhatsApp message containing a Google Form is sent to all members. Until the next Monday, each consumer can select the products via Google Form and receive a confirmation email. On every Wednesday evening, consumers can collect and pay their products and meet the farmers.

Fuori di Zucca is not just an online platform coordinating fair and sustainable purchasing transactions. The association mobilises a peer-to-peer network, where members of civil society, policy makers, producers, consumers can interact around a common mission: food sovereignty. This is done both via digital (e.g. Facebook page, Website, WhatsApp groups) and socio-physical means (e.g. organising group discussions, movies projections, food fairs). Figure 1 displays the various social, digital (or cyber), and physical entities in the domains composing the system ‘Fuori di Zucca’.
Figure 1: The Socio-Cyber-Physical System of the Solidary Purchasing Group ‘Fuori di Zucca’

The Socio-Cyber Domain

Online platform
Volunteers who coordinate market transactions and people exchanges via Google Modules, WhatsApp groups, website, social media

Sending weekly order list

Sending weekly panel offers and validating final orders

Selecting weekly food orders

Transmitting weekly food orders from consumers

The Socio-Physical Domain

Transport and logistic infrastructure

Farms and food processing equipment

The S-C-P Domain

Meeting points
Public, physical meeting space to deliver, collect, discuss, collaborate

Conscious society
Share values, norms, and knowledge to support solidarity, fair and sustainable food thoughts and actions

Social Network supporters
People who actively lead, promote, mobilize, animate, facilitate, intermediate the social exchanges and relationships among actors

Consumers
Presenting and delivering food products, providing explanation or telling the story behind food, meeting final consumers

Buying and collecting products on the meeting place, talking to producers and other consumers, gaining direct knowledge on food and agriculture

Farmers
The role of digitalisation in Fuori di Zucca

Between 2016-2017, e-mail was the main tool used by Fuori di Zucca to coordinate the purchases. Considering its pervasive adoption in smartphones, emails were replaced by WhatsApp groups and messages (2017-2020). Each tool has its pros and cons. For instance, orders via WhatsApp’s groups were weak in terms of structuring data collection, data analytics, reducing error risks, respecting people privacy, streamline the volunteers’ work with the growing demands and number of members.

These challenges were overcome by combining WhatsApp messages with a link to Google Module, as discussed and agreed by the members. The following results proved that this combination was successful not only in terms of better management of transactions, but also in terms of increasing expenditure and orders, which are vital for the sustainability of the group.

It is important to highlight that digital tools are not the only factor contributing to this progress. Domenico explains that these results can also be due to the position of the meeting point, the number of producer members, the range of products in the panel lists, the stability of consumers residence and lifestyle, etc.

The number of purchases or the volume of expenditure are not the only parameters to assess the relevance of this solidarity group. Social, cultural, and moral aspects need to be considered, such as promoting consumers’ awareness about food seasonality, education about traditional food recipes, and transparency about origin of food products. By any digital or socio-physical means, Fuori di Zucca plays an important educational and governance role in sustainable food consumption and production.

Behind each digital tool, there is a system of values, views, knowledge, infrastructure to be developed. Fuori di Zucca shows how the adoption of simple tools can drive a sustainable digitalisation in agriculture which challenge food market concentration and provide citizens with high quality food to a fair price.
